

Energy Rate Analysis (ERA)

What is ERA?

Quite simply, Energy Rate Analysis (ERA) gathers the electric utility rate plans plus the options (riders) available in your area, and compares them with your facility's dynamics and usage patterns. Our exclusive program will reveal if you are paying too much for electricity and will generate what you can expect as guaranteed savings.

What we do

We perform a Feasibility Study of your facility. This survey examines how power is delivered to your building(s). After we determine how power is delivered, we perform an in-depth evaluation of how the power is distributed and utilized within your facility. All of this information is compiled into our program, which will compare it with the countless riders available for each of the electrical rate plan. Finally, this program determines the best rate plan & riders for your facility and generates the guaranteed savings.

Why do you need ERA?

In most areas, there are typically 3-5- basic electric rate plans available. Within each rate plan, there are countless riders available to customize the rate structure to your particular needs. Depending on the size of your facility, how much power you use, and when you use it, there are possibly dozens of riders available in multiple combinations to minimize your payment. You need ERA to help you get a handle on your operating expenses.

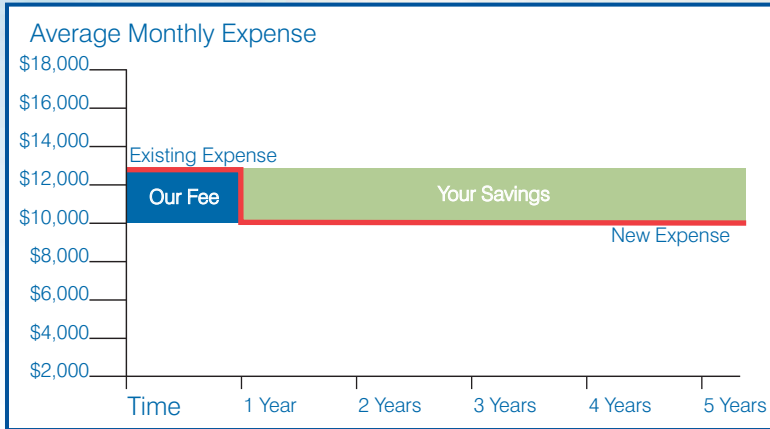

Did you know?

- 1 in 4 commercial/industrial buildings are in the wrong rate structure plan for their facility.
- Companies in the wrong rate plan are paying on average 18% more than they should be paying.
- Most areas have 3-5 electrical rate plans, but within those plans, there are hundreds of riders available.
- Our feasibility study is done at no cost or obligation to you!

It's win-win, redefined.

Q: How do I pay for ERA?

A: *Simply apply your rate changes, then let ERA begin to pay you back.*

It's easy to get started

There are three simple steps to get started:

1. Get a copy of the past 3 months of electric bills.
2. Sign the electrical release form which allows us to get detailed data from the utility company.
3. Allow us to perform an on-site study.

Results typically take 2-3 weeks to generate.

It's win-win, redefined.
