

Ready for Renewables?

Want to get solar or wind power onsite where you work or live? Good for you!

We just have a few questions for you:

1. Have you had an energy assessment for your building and if so, are you energy efficient?
2. Let's say you are energy efficient. Is your site a good candidate for solar or wind? Is it oriented well to the sun? What's the quality of wind where you are located (it varies across the state)? Are there obstructions, like tall trees or buildings, which might compromise performance of either system?
3. What are the zoning ordinances and building codes that may favor—or hinder—your adopting solar or wind power at your location?

Michigan Energy Options can help you answer these crucial questions.

We also can provide the energy assessment of your building and site assessment for wind or solar.

We will also explain options based on available technologies, your budget, desired payback, and any financial incentives available.
